

## **PRINCETON PLASMA PHYSICS LABORATORY**

Princeton Plasma Physics Laboratory, established in 1951, is a single-purpose research lab of the DOE, managed by the trustees of Princeton University. Its primary mission is to conduct basic and applied research and development to improve the understanding of controlled nuclear fusion in a Toroidal Magnetic Confinement Configuration and other related technologies essential to the DOE National Fusion Program. The lab's missions include science education at all levels and technology transfer.
